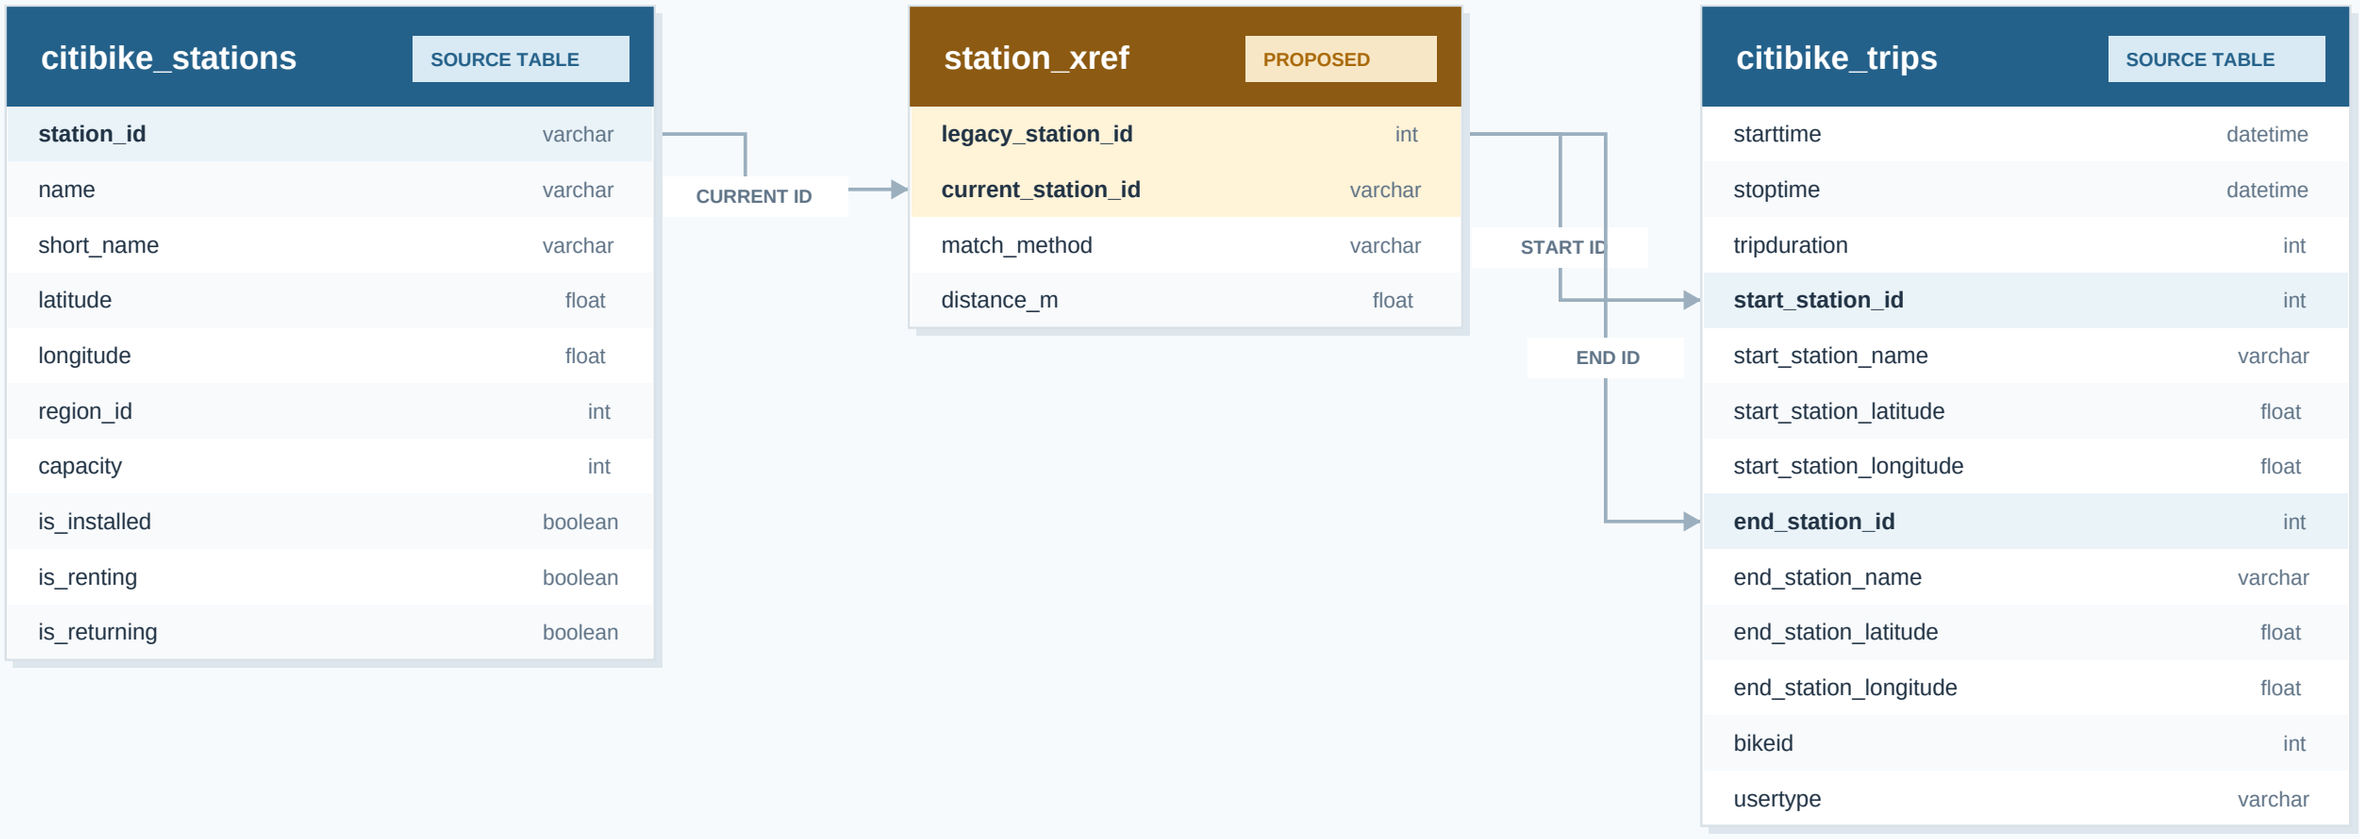
Citi Bike data model

Source tables and proposed station crosswalk

JOIN CAUTION Trip station IDs are legacy integers; current station IDs are strings.
The crosswalk and all join paths below are proposed and have not been validated.



Relationship paths shown

citibike_stations.station_id -> station_xref.current_station_id

station_xref.legacy_station_id -> citibike_trips.start_station_id and end_station_id

station_xref is proposed, not a source table. Current station data is a modern snapshot and may not match the 2013-2018 trip network.

Schema fields shown are the ERD-relevant subset; no primary keys are asserted.
